

LP400 Airless Sprayer

The LP400 delivers the durability of an Airlessco, with the simplicity of a mechanical pressure control system. It's built on a compact, well-balanced triple chrome plated carry frame sturdy enough to stand on.

The 400 is powered by a dependable fan cooled, totally enclosed DC motor. The heart of any sprayer is the pump, and the durability of the LP pump is legendary amongst professional painters. It features the oversized "Slow-Stroking" hardened stainless steel piston, & our patented triple-life packing system. The only packing system with external adjustment of upper and lower packings. No getting stuck on the job with blown packings and a sprayer full of paint!

Painter sprayers are a big investment. Don't settle for equipment that isn't "Built to Perform. Built to Last."

For LP400 complete with 50' of 1/4" hose, 008 Silver Gun with built-in swivel, order part # 331-834.

LP400 SPECIFICATIONS

MAXIMUM TIP SIZE	.021"
OUTPUT in Gallons Per Minute	
@ Pressure (2000 psi)	.46
@ Free Flow	.5
RATING WITH LATEX PAINTS
